

**THE BUDDIE
SYSTEM**
INSTANT SAFETY ALERT

SNAP.

ALERT!

STOP.

(rss) ropeandsling.co.uk

Introducing: **The Buddie System (TBS)**

A wireless instant safety alert device designed for crane operators and dogmen enabling rapid alarm activation in emergencies.

The **TBS** device overcomes the shortfalls of two-way radio failure and often-inaudible backup whistles. The **TBS** lanyard allows a dogman/slinger to instantly transmit an alarm signal to a crane operator to stop.

Up to ten lanyards can be paired to the crane mounted alert device with a range of up to 1km*.

A quick snap on the **TBS** lanyard activates the alarm.
